

Penguins Marching Into Your Classroom

Penguin Science is an NSF funded project engaging and educating classrooms and the public with Antarctic penguins as they raise their chicks and cope with global climate change. Go here to the classroom activities and virtual field trip to the Adélie Penguin breeding colony, live from Antarctica Nov-Jan every year. http://www.penguinscience.com/classroom_home.php

Students adopt a penguin family, keep a field notebook recording foraging trips, egg hatching and chick rearing data.

Combine science, art and geography as students track their postcards mailed to them from Antarctica.

Classroom ready activities, teaching powerpoints, short videos and movie clips on the biology and behavior of Adélie Penguins.
