The Future of Getting Around Classroom Presentation

Activity Directions

It is 30 years in the future and petroleum-based fuels are scarce and expensive.

Follow these guidelines to create a vision of your transportation future:

- Write or draw a representation of what this future looks like.
- Include the mode(s) of transportation people are using to travel.
- Include the fuel or source of power. Consider options in wind, solar, magnetic, pedal-power, or create a new source of power that has yet to be invented.
- Include any rules related to transportation (e.g., no idling, speed limit).
- Include a representation of the infrastructure that would be needed for these sources of transportation (e.g., roads, bridges, waterways).
