

Recycled Planters

1. Place a can on its side and roll one of the newsprint strips around it. Allow the paper to overlap one inch and cut off the excess. Then place a small dot of glue on the seam. Continue this process until the can is covered.

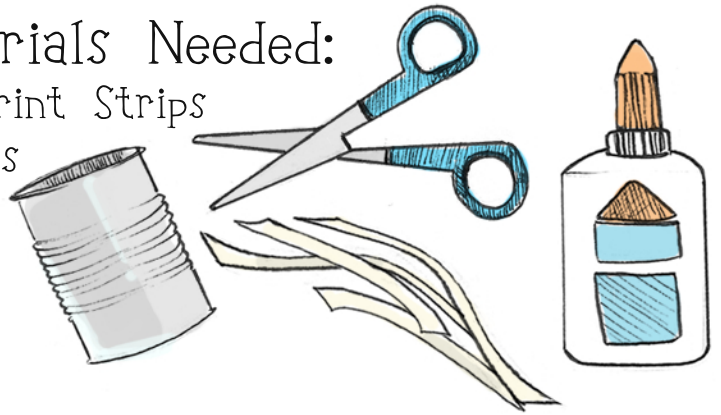

Materials Needed:

Newsprint Strips

Scissors

Glue

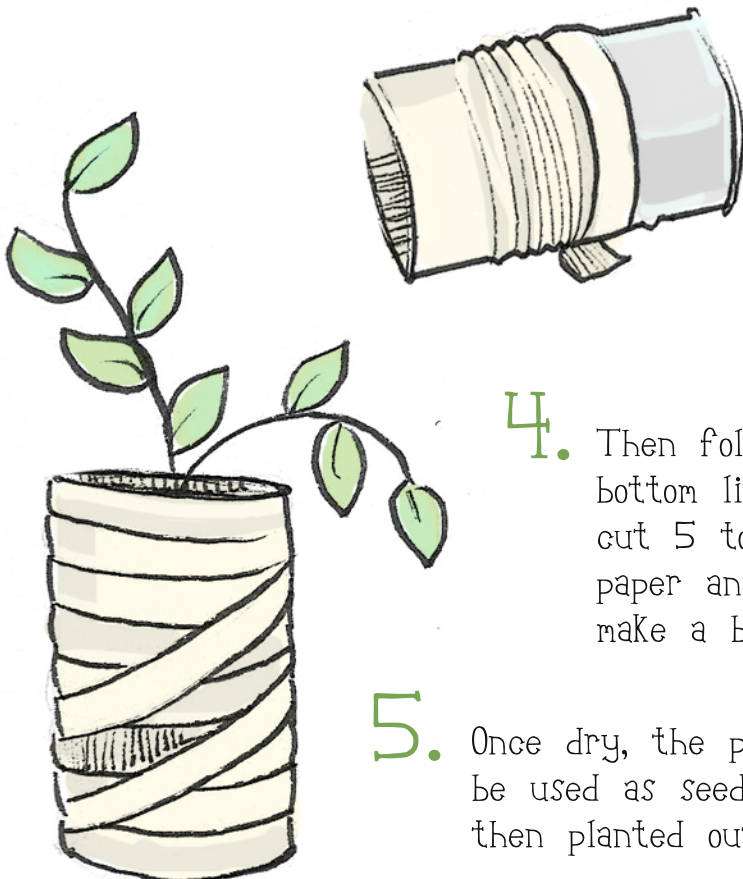

Can

2. Once the can is covered, repeat the same process by placing and gluing a second layer of newsprint around the can, making sure to alternate the newsprint's placement in order to cover seams.

3. Gently push the can out of the glued paper pot so that an inch or two of the paper is free.

4. Then fold and glue the bottom like an envelope, or cut 5 to 6 slits in the paper and fold it inward to make a bottom.

5. Once dry, the paper pots can be used as seed starters and then planted outside.
