

Make a Butterfly Window Box

1. Fill the window box with potting soil, almost to the top.

2. Create a puddle for the butterflies by placing a shallow bowl or jar lid in the soil. Then fill it with a little bit of soil, and add water. This puddle helps provide water and nutrients for our fluttering friends.

3. Plant the butterfly friendly flowers in the box, making sure to group several types of the same flower together.

4. Then arrange the flat stones, or wood, in the soil around the flowers to give the butterflies a place to rest.
